The Consulting Services of Ada Business Technology should be used when:

- An enterprise is implementing business or manufacturing systems and requires technical hands-on leadership with business savvy and a proven track record of successfully implementing ERP, WMS, and CRM systems
- An IT department needs to be augmented to comply with regulations such as HIPAA and SOX and must conform to best practices such as the COBIT Framework and security in conformance with ISO 17799 and ISO 27001
- A project manager with a proven track record is required to ensure the project is successfully delivered on time and at or under budget

augmented to comply with regulations such as HIPAA and SOX and must conform to best practices such as the COBIT Framework and

security in conformance with ISO 17799 and ISO 27001

Why Ada Business Technology is the best choice:

- Experience, Experience, Experience!!!
- Vendor independent, ABT will work with your vendors, on your behalf, ensuring the success of the project
- Ability to organize your IT department implementing best operational and security practices
- Use ABT for only as long as the support is needed. ABT's goal is to successfully complete the assignment on time and at or under cost
- Comprehensive project planning before the project starts including costs

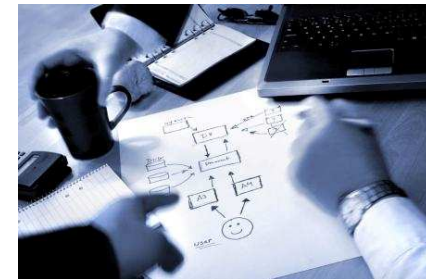

How Ada Business Technology implements its strategy for success:

Before the start of any consulting assignment, Ada Business Technology works with the client to develop a project plan. This is a key factor in ensuring the success of any assignment.

This plan includes:

- A comprehensive schedule of tasks that are to be completed
- Identification of all hardware and software including pricing
- An estimate of the labor required (ABT's and client's)
- A list of all software, documents and training to be delivered
